3 more Math stuff

3.1 \begin {matrix}

Matrix centers all values. With a character in front of matrix you can specify if there are brackets:

p... for parentheses
b... for brackets
v... for verts
B... for braces
V... for double verts.

Example:

$$\begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \end{pmatrix}$$

Code:

```
\begin{pmatrix}
& & \
& & \
\end{pmatrix}
```
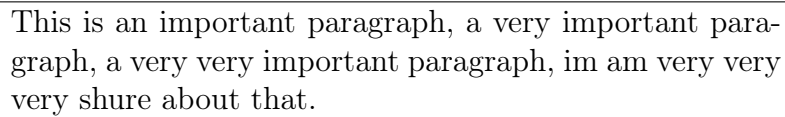

4 Xcolour

xcolor documentation: `https://www.namsu.de/Extra/pakete/Xcolor.html`

there is a coloured box: there should be a coloured textbox, aligned to the center of the line.

There is an important paragraph:

This is an important paragraph, a very important paragraph, a very very important paragraph, im am very very very shure about that.

Only framed is possible with fbox (\usepackage{fbox}):

This is an important paragraph, a very important paragraph, a very very important paragraph, im am very very very shure about that.

or with \fcolorbox{black}{lightgray}
